Luveli's income from bricklaying. The laying of the bricks that form a modern villager's house may bring 100 escudos.

The basic cash need of an Otjimbundu, then, is for money to pay government demands and to provide clothing for his wife and children, who seem more likely than the men to get new clothing every year.[1] Add to this the possibility of other calls (e.g. provision for a relative's funeral) a desirable income even for this low level of consumption would be 400 escudos (£5) and a more prosperous villager might earn and spend double the amount. Exceptional individuals still remaining within the normal conditions of Umbundu cultural and social life, such as Kambungo, may earn from 2,000 to 3,000 escudos a year, perhaps even more, from agriculture. Maize is the foundation of the agricultural economy, but Kambungo's remark that maize did not pay seems to reflect a trend to find other openings such as growing coffee, which is, however, subject to difficulties of climate.

Within the villages there is some trade in handmade objects such as pottery, sleeping-mats, and sticks for stirring mush, and there are quite a number of bricklayers, carpenters, and tailors (proprietors of sewing-machines) who have acquired European skills which bring them money. These craftsmen are, on payment of a fee of 250 escudos (a figure given me by a tailor), exempt from contract labour.

Many European residents seem to think that the only European products natives desire are cloths, clothing, and wine. This is not so; villagers wanted me to sell them kerosene for lamps, D.D.T. powder for their hair, and soap. It is interesting that the occasions on which an Otjimbundu would accumulate large (for him) sums all fall outside the maize-for-cloth pattern of trading. These occasions are bridewealth payment (and counting all expenses this may well come to 800 escudos—£10 or more), which is a traditional due, the purchase of bicycles (according to place of purchase from 1,200 escudos [£15] to 1,500 escudos [£18. 15. 0]) which are prestige-giving objects, and the trading journeys to buy cattle. Kambungo had

[1] The trader whose opinions I have previously quoted (Senhor Alberto Oliveira Mendes of Chicunda), remarked, 'It is the women who save us. The men make a shirt last for three or four years but the women get something new every year.'

spent 10,000 escudos, he told me, in buying shells to trade in Kwanyama country and even if this be regarded as an exaggeration such an expedition will cost at least several hundred escudos.

464 I have not so far discussed labour migration and its economic consequences. There are three ways of going out to work: being recruited for 'contract labour', which involves selection by the [466] chief and government headmen who send people to the post whence they are directed to wherever they are required; being recruited by labour-recruiters who visit villages with their lorries; and travelling, usually on foot, to find work. Contract labour is for a year, which may be followed by a fortnight's work at the post to which the *contratados* are returned. The coffee plantations of Amboim and Seles are important centres for voluntary labour from Gumba and neighbouring chiefdoms. Women, and boys from ten years up, go to work there for spells which may be only two months. However, even in Gumba whose people have a reputation for backwardness and for lack of enthusiasm for going away to work, there is nothing at all surprising in meeting men who have learnt a few words of English in Johannesburg.

[592] Of the 36 household heads of Epalanga, 9 were women, and 8 were men who for one reason or another (elders, cripples, the catechist) would not leave the village. Of the other 19, 6 were absent as labourers during some part of my stay, and this figure excludes individuals who were not expected home within a year.

[369] In the cities there are large numbers of permanently or semi-permanently urbanized Ovimbundu, who have largely lost contact with their home villages. Some people who have spent years in the towns may come home—in Epalanga there were at least five women who had visited cities.

Although almost all able-bodied men and many women have lived outside the context of village life as servants to Europeans, as labourers on plantations, and as urban workers, it would be [369] a mistake to think of the rural areas of the Benguela Highland, as being labour reservoirs economically dependent on the towns. 435 It seems that prices of manufactured goods are lower near the railway line and in the cities; hence a man returning from wage labour may buy cloths, a bicycle, a sewing-machine, or a

unambiguous approval, though there is a certain undertone suggesting cunning in the verb *oku lunguka* (to be shrewd) used about prosperous people. The old suspicion of sorcery attaching to people who were more successful farmers than their neighbours[6] seems to have disappeared. While a prosperous villager would be expected to lend money to a poorer kinsman (provided the latter was not known as a bad debtor) yet, the situation which occurs in other parts of Africa, where, as Dr. V. W. Turner notes of the Mwinilunga Ndembu, prosperous Africans 'find themselves increasingly embarrassed by the demands of their kin for presents in cash and kind'[7], would not arise among the Ovimbundu, who would regard such demands as being unjustified, even outrageous.

Wealthy Ovimbundu may spend some of their wealth on clothing and on drink. Cattle-buying has been noted as a form of capital investment and the same term may be used of small stock buying. Another way of disposing of money is by building a house of bricks with the assistance of a bricklayer. A plough may be, but rarely is, bought by two men joining together to pool their money. Generally speaking, the agricultural technology of the Ovimbundu has been little changed since 1911 except for the spread of the techniques of coffee-growing.

It has been noted earlier that the Ovimbundu play an important part in the economic life of Angola both as cultivators and labourers. In this chapter an attempt has been made to show how at the local level it is the cultivation of cash crops, rather than migration for wage labour, which incorporates villagers into the commercial economy of modern Angola. The main source of money in rural areas is the trader's store, which is also the main recipient of money, apart from the administration. While trade both between Ovimbundu and between Ovimbundu and other tribes survives on a minor scale, the social institutions associated with the rubber trade, the large caravans, the non-repayable loans within the matrilineal group, and the obligations of wealthy traders to assist their kin, have disappeared. The contemporary social structure with the
